

**I. Amendments to the Claims**

*This listing of the claims replaces all prior versions and listings of claims in the application:*

**A. Listing of Claims:**

Claims 1-10 (Cancelled).

11. (New) A terminal, comprising:

an ID data acquiring module for acquiring a user ID for identifying a user of the terminal;  
a browsing function module for selecting contents provided by a contents providing device to render the contents and for outputting access time duration during which the contents are selected by the user;

a display for displaying the contents rendered by the browsing function module;

a log data acquiring module for generating user log data, including the access time duration, using information output from the ID data acquiring module and the browsing function module;

a communicator for sending and/or receiving the contents and the user log data; and

a sensor for outputting gaze information to the log data acquiring module, the gaze information indicating whether the user gazes at the display or not,

wherein, after the gaze information is output by the sensor, the log data acquiring module determines that the access time duration output from the browsing function module is the access time duration of the user log data when the gaze information indicates the user gazes at the display, and that the access time duration of the user log data is set to zero when the gaze information indicates the user does not gaze at the display.

12. (New) The terminal in accordance with claim 11 wherein the log data acquiring module calculates total sum of the access time duration for each of the contents.

13. (New) The terminal in accordance with claim 11 further comprising:  
a user data acquiring module for acquiring user data of the user of the terminal,  
wherein the log data acquiring module acquires user log data using the user ID and the user data.

14. (New) The terminal according to claim 11 further comprising a public ID generator for generating a public ID by processing the user ID acquired by the ID acquiring module.

15. (New) The terminal according to claim 14 wherein the public ID generator generates the public ID by replacing the user ID with a random number.

16. (New) A log data managing device comprising:  
a communicator for receiving a user log data including access time duration during which a user gazes at a display of an information terminal;  
a log data manager for controlling and managing the received user log data;  
a judging module for judging a format of the received user log data; and  
a normalizer for converting the user log data to have a predetermined format if the judged format is different from a predetermined format.

17. (New) A contents renewing and providing device for changing a contents providing method upon receipt of log data from a log data managing device;

wherein the contents renewing and providing device calculates an average access time duration of all users for each of the contents and deletes the contents when the average access time duration does not satisfy a predetermined access time duration limit.

18. (New) A contents renewing and providing device for providing a contents search function, wherein

search results are presented in order of average access time duration of the contents.
